785 HUEZ RS DISC

ULTRALIGHT AND COMFORTABLE

PERFORM ON THE 2 SLOPES OF THE COL

Guided by an unequalled and unrelenting quest for excellence and performance, LOOK, who is constantly searching for technological innovations, is once again focusing its concept of creativity on comfort and weight savings to produce an ultralight and comfortable bicycle with a sophisticated design. **An identical geometry for two exceptional carbon bicycles with exceptional characteristics.**

785 HUEZ RS

TECHNOLOGY

OPTIMIZED INERTIA SECTION

To create the 785 HUEZ RS, we began by studying and improving the shape of all of the tubes. Optimizing the shape requires defining the design that provides the maximum inertia for each tube, that is to say, to choose the optimal length, size and shape that produces the best stiffness-to-weight ratio. **We therefore, opted for a sleek and sophisticated design based on precise research, entirely focused upon the search for efficiency and performed by our engineers, to create an ultralight bicycle with the best possible characteristics.**

ULTRA HIGH MODULUS CARBON

Once the optimal length, size and tube thickness have been determined, the next step is to establish the ideal carbon composition to achieve our objective, the creation of the best bicycle made for climbing. To accomplish this, the recipe is similar to that of gastronomic cuisine. To make the best dish, one needs ingredients of the highest quality. **LOOK has therefore selected only superior carbon fibers, including the finest of the high modulus, to create the HUEZ 785 RS. We have chosen five different types of carbon, each one selected for its outstanding quality in its category.**

NANO LAYER CONSTRUCTION

The parallel with gastronomy does not stop here. It is not enough to have the finest ingredients. They must be coupled with the best recipe. Strong, with over 30 years of carbon technology know-how, skill and expertise, **LOOK engineers, in their manufacturing facility, ultra-precisely define the position and orientation of each of the thin layers of carbon used to create their tubes.**
