Introduction

The Speedmachine represents the pinnacle of functional integration, aerodynamic form and rider-focused fit. By patiently following these guidelines, the content of this manual will lead to properly fitting and functioning equipment with a high-performance, Swiss Engineered aesthetic.

BMC Speedmachine frame and components are designed as a system to provide a very high level of aerodynamics and riding performance. Adjustability was not in any way compromised and the Speedmachine offers the highest adjustment possibility ever built into a fully integrated triathlon or time trial bicycle.

Adjustability being a key part of the system's performance, it is necessary to understand that most components of the frameset have been designed specifically for speedmachine and their function may slightly differ from your traditional road bike "off the shelf" components.

BMC speedmachine uses all the latest and most high-end technologies that can be found in bicycle manufacturing, including sharp edged and thin-walled carbon fiber composite construction, which should be treated with delicacy from the end user to prevent permanent and sometimes invisible damage.

For the reasons mentioned above, we ask you to carefully follow the instructions provided in this manual.

Incorrect mechanical operation on your bicycle could lead to serious damage, which could cause you to fall and lead to injury or death.

If you do not have the appropriate tools or experience to execute the following instructions, or if you need further information, please contact your official BMC dealer for service of your bicycle.

 **WARNING:** This guide is not an assembly manual – it is solely intended for identifying which configurations can match a given position.

Please refer to the SPEEDMACHINE Gen1 Owners Manual for all assembly instructions.

Sizing and parts selection

Positioning

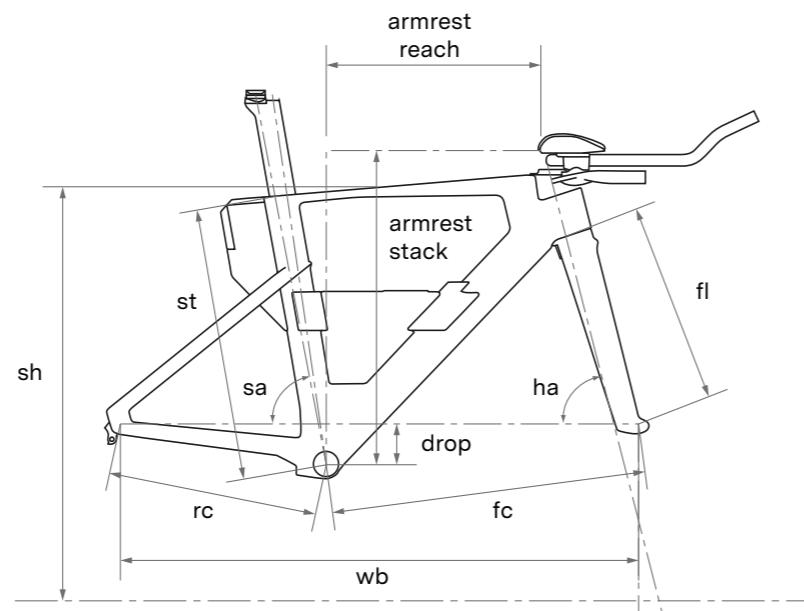

A bicycle rider will only perform at his best if he is correctly positioned on his bike, especially for triathlon and time trial competitions.

The following instructions are simple guidelines to help you decide which size and which extension configuration to choose in order to reach a given handlebar position. We do not in any way provide you with a fitting tool, those instructions can only help you once your position is defined. If you wish to change the position from your previous bike or if the speedmachine will be your first triathlon or time trial bike, we highly recommend you to visit a professional fitting expert.

Many different handlebar types and shapes are available on the market and it is not possible for BMC to guarantee accurate positioning for all of them. The base bar, arm-rest set, extensions and seat post provided with the speedmachine complete bikes and modules were carefully selected to offer the highest adjustment possibilities in a light, reliable and user-friendly package. Therefore we suggest you start by using the original speedmachine components and carefully follow the instructions. Then, multiple customization options are described later in this manual.

Frame geometry

General frame geometry

Size	S	M	L
Rider Height cm	<174	172-185	>180
Armrest Stack (stack)	558-650	586-678	628-720
Armrest Reach (reach)	348-467	368-487	395-514
Seat Tube (st)	460	525	551
Seat Tube Angle ° (sa)	80°	80°	82,4°
Rear Center (rc)	405	405	405
Front Center (fc)	578	606	646
Wheelbase (wb)	974	1000	1040
BB drop (drop)	62	72	72
Fork Length (fl)	391	391	392
Standover Height (sh)	766	806	837

INFO: INFORMATION: Values communicated are for the Flat Base bar and consider all variations of tilt.

Sizing table summary

This table regroup every adjustment range available by frame size.

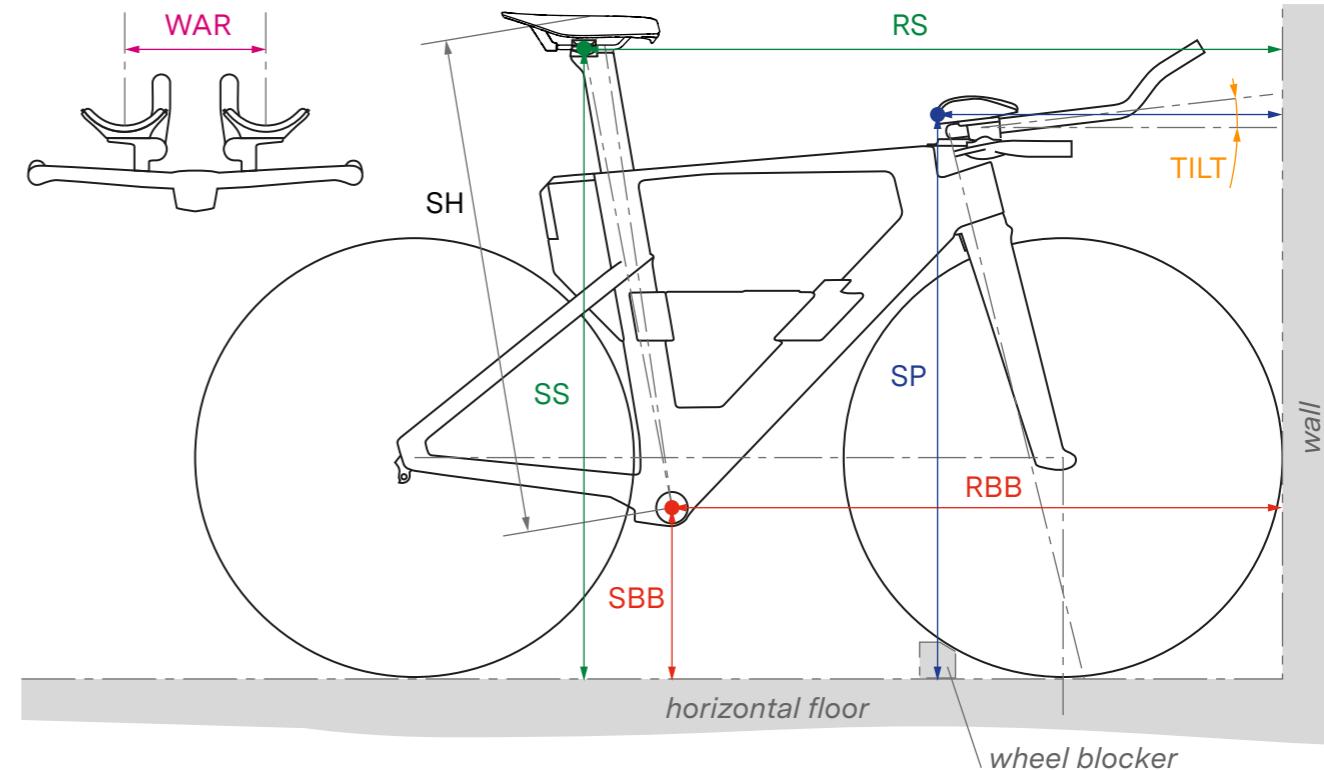

INFO: INFORMATION: This sizing method do not integrate the tilt adjustment offered by the Profile Design Aeria. We are starting with a "0° setup" and the tilt adjustment can be applied later.

	S	M	L	
Rider size (Recommended, theoretical)	< 174	172	185	> 180
Saddle height (theoretical)	< 725	715	782	> 755
Saddle height range (uncut seatpost)	610	740	705	835
Saddle height min (cut seatpost)	575		640	
Flat base bar	Armrest stack	558	650	586
	Armrest reach	348	467	368
Low base bar	Armrest stack	525	617	553
	Armrest reach	383	502	403
				645
				595
				687
				549

How to measure your current position

With your current bike

In the best scenario, you already have a bike adjusted to your desired position. If there is any doubt for you regarding which position you should use, we highly recommend you to visit a professional bike fitting expert, who will be able to give you the required data.

To take those measurements, the easiest way is to place your bike on a even, horizontal floor and lean it in a corner of a room so the bike is parallel to a wall and the front wheel against the perpendicular wall of your room corner.

All values for Pad X are given to the rear of the armrest pad.

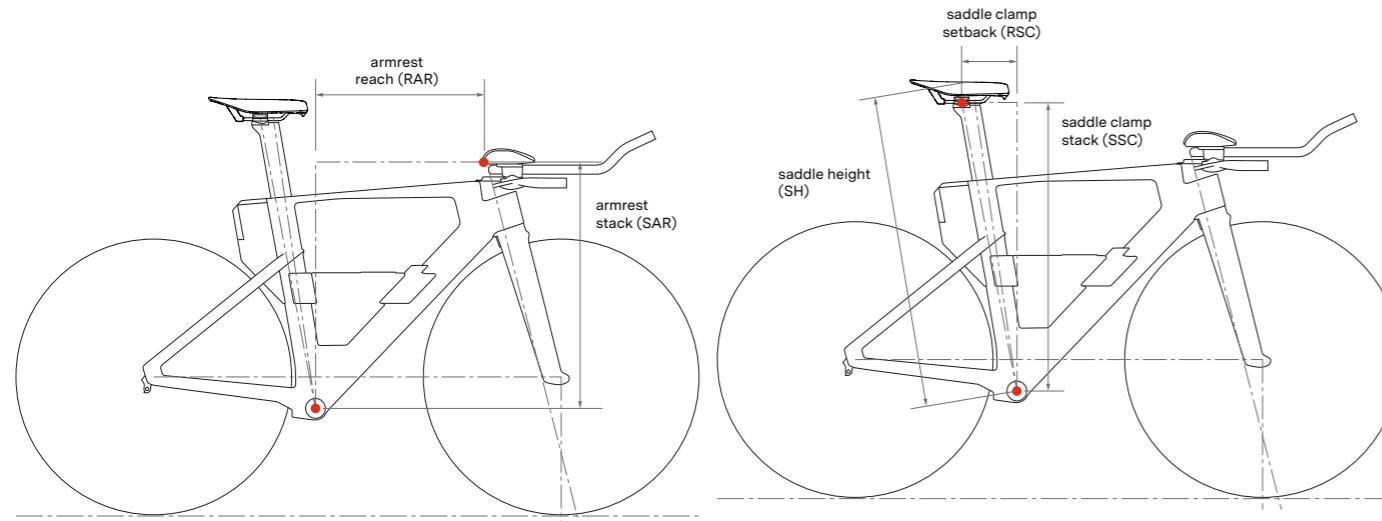

Values for Pad Stack and Reach include the cushion.

Take the following measurements:

- Vertical distance from the floor to the BB axle center (SBB).....
- Horizontal distance from the front wall to the BB axle center (RBB).....
- Vertical distance from the floor to the back of your pads (SP).....
- Horizontal distance from the front wall to the back of your pads (RP).....
- Vertical distance from the floor to the center of the saddle clamp (SS).....
- Horizontal distance from the front wall to the center of the saddle clamp (RS).....
- Distance from saddle top to the BB axle center (SH).....
- Armrest/extensions tilt (TILT).....

Fit coordinates

You can extract the final fit coordinates from the previous paragraph or from a bike fitting report.

	Measured distance Contact Point	Measured distance Bottom Bracket	Final measurements	
Armrest/extensions tilt			TILT	
Armrest pad reach	RBB -	RP =	RAR
Armrest pad stack	SP -	SBB =	SAR
Armrest Width value			WAR
Saddle height			SH
Saddle clamp stack	SS -	SBB =	SSC
Saddle clamp reach	RS -	RBB =	RSC

Frame size and cockpit configuration

⚠ WARNING: This sizing process is a starting point using your current fit coordinates. Please always consider the help of a professional bike fitter to get yourself fitted onto the Speedmachine.

ⓘ INFORMATION: The sizing guide starts with components initially delivered with your bike or module. If your current fit coordinates are not matching the adjustment ranges offered by the initial specifications it continues by suggesting components that are optional and available through our after-market program.

ⓘ INFORMATION: Even with the best range of stack and reach adjustment, the Speedmachine may not be able to cover some extreme fit coordinates. You always have the possibilities to get the bike to fit yours using after-market customized cockpit solutions that would be assembled on the Speedmachine Base bar.

ⓘ INFORMATION: The cockpit must comply with Profile Design Aeria 3 interface.

⚠ WARNING: You always must check compatibility and safety with the cockpit manufacturer.

Profile Design options

Profile Design offers a wide range of compatible parts to tune your cockpit setup to your needs.

You can find the latest product information on www.profile-design.com.

Extensions	Description	Part Number
43ASC-340	Shaped aero carbon extensions, 340mm long	ACASC43EXT340
43ASC-400	Shaped aero carbon extensions, 400mm long	ACASC43EXT400
50SLC	50deg carbon extension, designed for low weight	ACSLC50EXT400
35SLC	35deg carbon extension, designed for low weight	ACSLC35EXT400
43SLC	43deg carbon extension, designed for low weight	ACSLC43EXT400
4525SLC	25deg carbon extension, designed for low weight	Stock part
52a	52deg alloy extensions	AC52EXT400
39a	39deg alloy extensions	AC39EXT400
26a	26deg alloy extensions	AC26EXT400
Armrests	Description	Part Number
Race+	A tighter cup for riders that like to feel locked in	ACMRCKT1
Ergo+	A highly adjustable armrest intended for comfort	Stock part
Armpads	Description	Part Number
10mm	A high density pad with a grooved surface for grip and water dispersion	Stock part
15-10mm	Adds 5mm under the elbow with a taper to 10mm sides	ACMER105PAD
10-5mm	10mm under the elbow with 5mm on the sides for comfort on the Race+ armrest	ACMER1510PAD
Brackets	Description	Part Number
A2 Race	A lighter, smaller platform bracket with less adjustment than the standard model	ACARARBRKT
A2 Standard	A highly adjustable bracket offering a wide range of pad positions and 15deg of tilt	Stock part
Risers	Description	Part Number
A3A Low	5-35mm of spacers, no bridge required	ACA3ALRSKT
A3A High	40-65mm of spacers with a 5mm bridge. Bridge is not UCI legal	ACA3AHRSKT
A3C High	Required for UCI legal racing, features an integrated carbon bridge	ACA3CHRSKT

Custom options

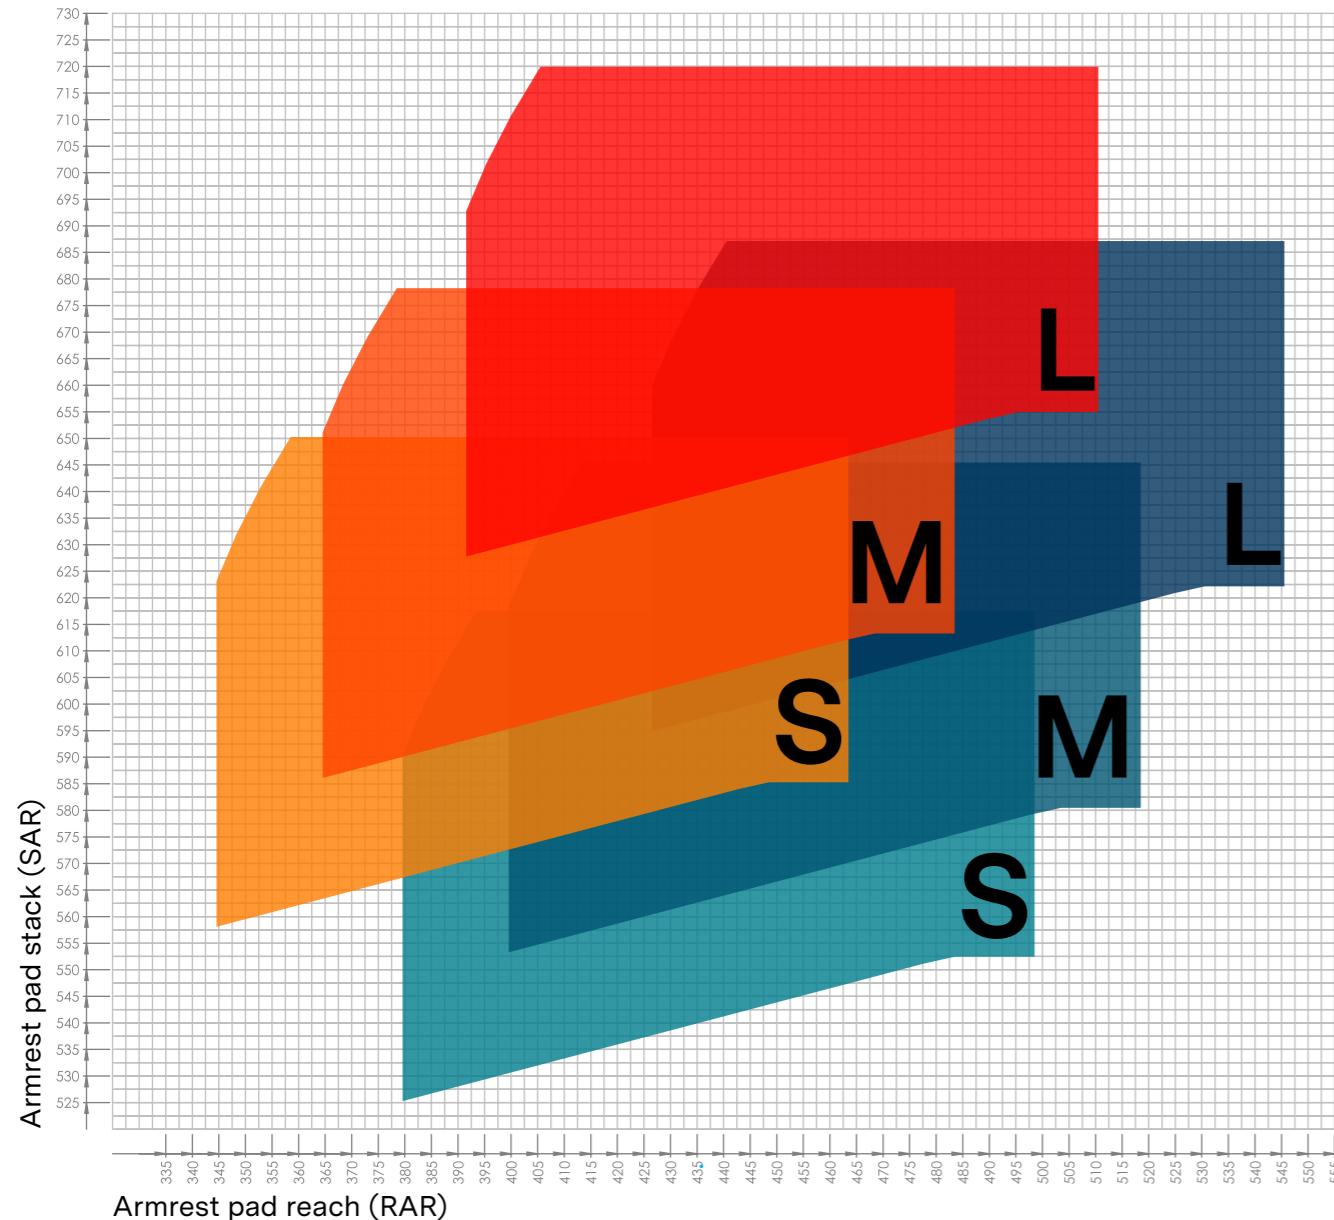

As the Speedmachine Base bar complies with Profile Design Aeria 3 interface, you could opt for a full customized solution.

Here are some existing custom cockpit manufacturers (not limited to this list).

- UNIQO CUSTOM BIKES www.uniqocustombikes.com
- WATTSHOP www.shopforwatts.co.uk
- SWISS SIDE www.swissside.com
- AERO COACH www.aero-coach.co.uk
- FAST TT www.fasttt.bike

Frame size, Base bar, Tilt, Stack and Reach

For a quick selection of your Frame and Base bar, you can use your SAR and RAR values and report them on the Speedmachine Stack Pad and Reach Pad graphic bellow.

For a detailed configuration, we will find the matching Speedmachine setup using the following steps:

1. Lookup for your tilt
- 2A. Use your Armrest Stack value (SAR) and find your [Base bar type](#) and [Reach Pad position](#).
- 2B. Use your Armrest Reach value (RAR) and find your [Stack Pad position](#).
3. Use your Armrest Width value (WAR) and find your Width pad setup and position
4. Use your Saddle Clamp values (SSC and RSC) and find your saddle clamp setup.

1. Tilt selection

Tilt could be adjusted to every degree of precision. To make your setup process easier, we have simplified the tilt selection to 0°, 5°, 10° and 15°.

Select the nearest tilt value and go to the appropriate page:

- 0° go to page “Tilt 0°”, page 12
- 5° go to page “Tilt 5°”, page 14
- 10° go to page “Tilt 10°”, page 16
- 15° go to page “Tilt 15°”, page 18

2. Stack and Reach tables - Tilt 0°

2A. Reach: select the closest Reach value (RAR) from the table and note *Base bar type* and the *Reach Pad position*.

Frame	Base bar	1	2	3	4	5	6	7	8
S	Flat	359 ¹	374 ²	389 ³	404 ⁴	419 ⁵	434 ⁶	449 ⁷	464 ⁸
M	Flat	379 ¹	394 ²	409 ³	424 ⁴	439 ⁵	454 ⁶	469 ⁷	484 ⁸
L	Flat	406 ¹	421 ²	436 ³	451 ⁴	466 ⁵	481 ⁶	496 ⁷	511 ⁸
S	Low	394 ¹	409 ²	424 ³	439 ⁴	454 ⁵	469 ⁶	484 ⁷	499 ⁸
M	Low	414 ¹	429 ²	444 ³	459 ⁴	474 ⁵	489 ⁶	504 ⁷	519 ⁸
L	Low	441 ¹	456 ²	471 ³	486 ⁴	501 ⁵	516 ⁶	531 ⁷	546 ⁸

2B. Stack: select the closest Stack value (SAR) from the different frame size tables using the *Base bar type* and the *Reach Pad position* and note the *Stack Pad position*.

frame size S		Reach Pad position							
Flat	Low	1	2	3	4	5	6	7	8
Stack Pad position		0mm	15mm	30mm	45mm	60mm	75mm	90mm	105mm
1	0mm	552	552	552	552	552	552	552	552
2	5mm	557	557	557	557	557	557	557	557
3	10mm	562	562	562	562	562	562	562	562
4	15mm	567	567	567	567	567	567	567	567
5	20mm	572	572	572	572	572	572	572	572
6	25mm	577	577	577	577	577	577	577	577
7	30mm	582	582	582	582	582	582	582	582
1	0mm	585	585	585	585	585	585	585	585

2. Stack and Reach tables - Tilt 5°

2A. Reach: select the closest Reach value from the table and note *Base bar type* and the *Reach Pad position*.

Frame	Base bar	1	2	3	4	5	6	7	8
S	Flat	353	368	383	398	413	428	443	458
M	Flat	373	388	403	418	433	448	463	478
L	Flat	400	415	430	445	460	475	490	505
S	Low	388	403	418	433	448	463	478	493
M	Low	408	423	438	453	468	483	498	513
L	Low	435	450	465	480	495	510	525	540

2B. Stack: select the closest Stack value from the different frame size tables using the *Base bar type* and the *Reach Pad position* and note the *Stack Pad position*.

frame size S		Reach Pad position							
Flat	Low	1	2	3	4	5	6	7	8
Stack Pad position		0mm	15mm	30mm	45mm	60mm	75mm	90mm	105mm
1	0mm	543	545	546	547	549	550	551	552
2	5mm	548	550	551	552	554	555	556	557
3	10mm	553	555	556	557	559	560	561	562
4	15mm	558	560	561	562	564	565	566	567
5	20mm	563	565	566	567	569	570	571	572
6	25mm	568	570	571	572	574	575	576	577
7	30mm	573	575	576	577	579	580	581	582
1	0mm	576	577	579	580	581	583	584	585
8	35mm	578	580	581	582	584	585	586	587
2	5mm	581	582	584	585	586	588	589	590

3. Width and final armrest pads positions

To determine the armrest final setup and bolts positions, identify in the illustration bellow the right combination of:

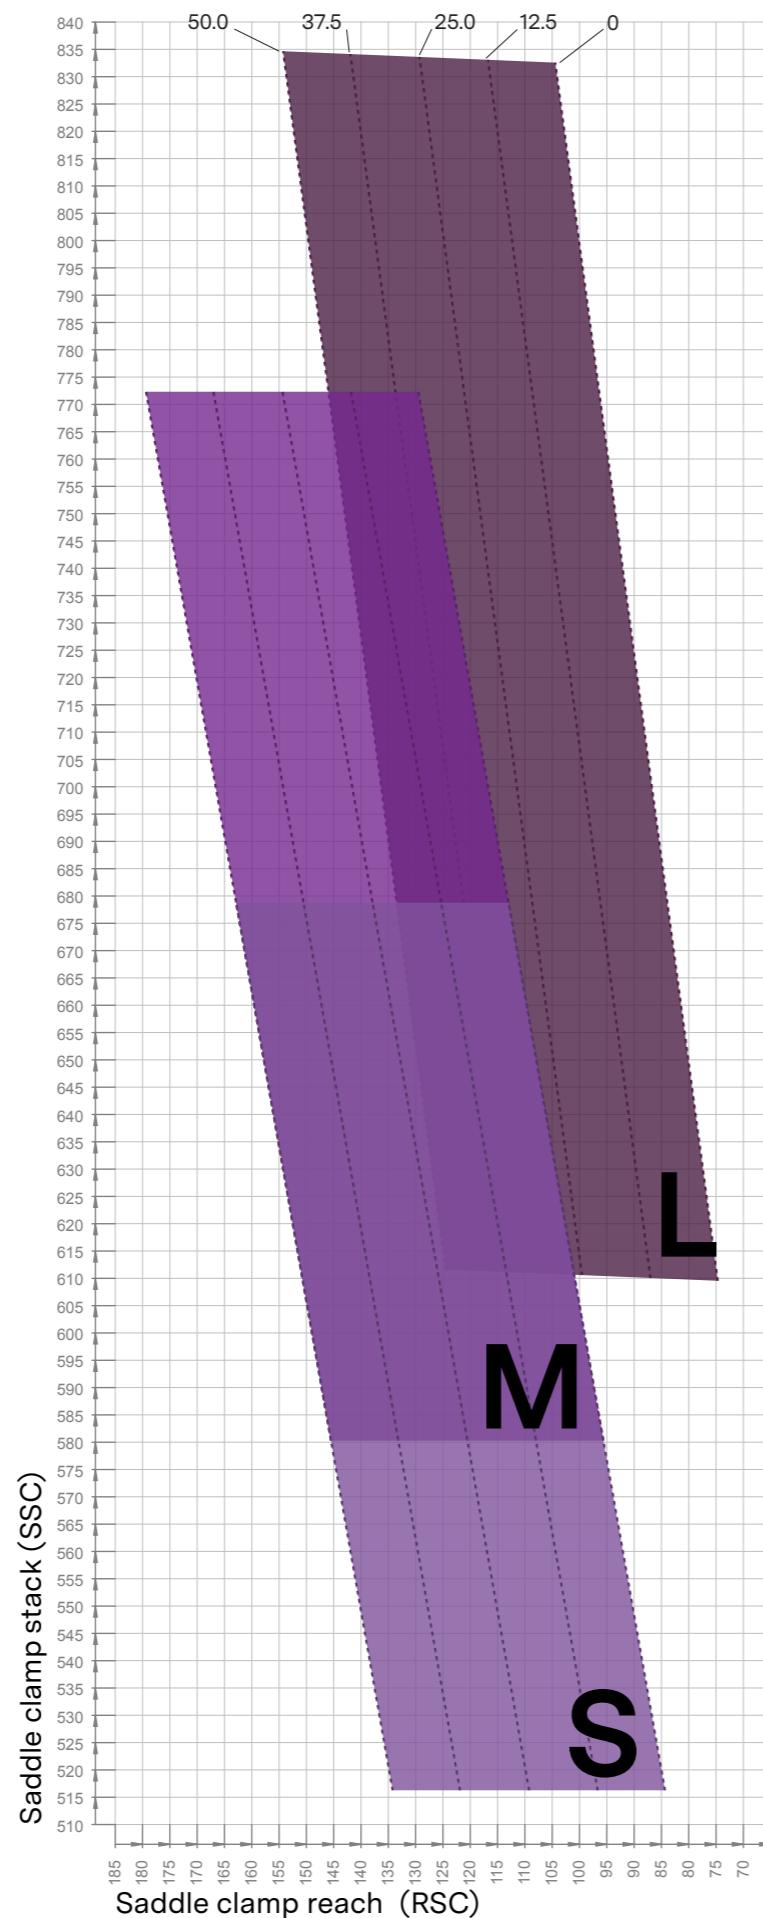

- *Reach Pad position* here in red.
- Armrest Width value (WAR) here in black.

You could invert left and right armrests to tune the armrest width.

4. Seat post hardware position

Sizing and parts selection

To determine the right position of the saddle clamp (seatpost hardware), you need to know SSC and RSC.

Place the SSC and RSC values in the chart. The point thus created will fall into a colored zone and near a dotted line.

- The color code will confirm the frame size saddle height adjustment (from bottom bracket to saddle clamp)
- The dotted line will guide you for the offset selection.

⚠ WARNING: Saddles are all different and this chart gives you a general information. Please double check your saddle adjustment on the final bike.

ℹ INFORMATION: The Speedmachine is delivered with a seatpost providing 0, 12.5 and 25mm offsets. If you need either 37.5 or 50mm offset, an optional seatpost is available in our after-market program.
